

Abstract

Compliance and regulations are often seen as blockers to innovation—but they don't have to be. In this session, we'll explore how platform engineers can build internal developer platforms that meet strict regulatory requirements without sacrificing developer experience or speed. We'll cover strategies like built-in compliance controls, audit-friendly defaults, and processes that build trust—so you can spend less time fighting bureaucracy and more time shipping value. This is a practical guide for anyone tired of hearing "no" from legal and wants to design platforms that make "yes" the default.

Pragmatic Guide to Compliance and Platform

Pragmatic approach

Design for compliance

Build trust over time

Work with what's already there

≡≡ *TRICE*

Rise of the Internal Developer Platform

Heavy industry adoption

Glue together the sprawl of tools and systems

Speed up provisioning and simplify CI/CD

Encourage and enforce best practices as needed

Reducing cognitive load for developers

Why platform needs to care about compliance

Existing compliance workflows

Combination of application portfolio management and workflow tools.

Data quality suffers as development processes evolve.

Despite frustrations, replacement efforts routinely stall.

service account
provisioning black hole

maze of registering that
change record

log-access snake pit

A pragmatic approach

Integrate with existing
ways of working

Build trust over time

Don't get distracted
by silver bullets

examples

Digital Operational Resilience Act (DORA)

ICT Risk Management

*"in order to ensure that **all changes to ICT systems are recorded**, tested, assessed, approved, implemented and verified in a controlled manner" – Article 9.4(e)*

"ICT change management, including changes to software, hardware, firmware components, systems or security parameters,"

CI/CD Automation for change records

- + Lean in to existing solution
- + Automated
- + Low cognitive load on developers
- Traceability limited to application CI/CD pipeline

audit friendly defaults

Audit friendly defaults

- + No extra setup for teams
 - + Breakglass in case of emergency
 - + Audit events allows review of overrides
-
- Lock-in solution
